ABSTRACT

Twelve tables are presented, which provide enrollment and staffing data concerning the 100 largest school districts in the United States. The data were reported to the National Center for Education Statistics in the spring of 1989 through the Common Core of Data survey series, and files used for this report contain data for all 50 states, the District of Columbia, and 5 outlying areas. While they represent fewer than 1% of the nation's school districts, the 100 school districts are responsible for educating 8,788,448 students (approximately 22% of all public school students) and 40% of all minority students. Most of the 100 largest districts are located in coastal states. There is a tendency for these school districts to have larger schools and slightly higher pupil-to-teacher ratios than other districts. These 100 districts also employ about 21% of the nation's public school teachers. Two figures summarize overall data. An appendix lists the 500 largest districts in the United States in 1988-89. Highlights

- The 100 largest public school districts, representing fewer than 1 percent of all school districts in the nation, are responsible for the education of about 22 percent of all public school students.
- Although almost all of these districts encompass large cities, in only 50 cases is the school district limited to the city alone rather than to a larger jurisdiction.
- Most of the 100 largest districts are located in coastal states.
- The 100 largest school districts, as a group, enroll a disproportionate number of the nation's minority students (40 percent of all minority students).
- The 100 largest districts tend to have larger schools (700 versus 480) and slightly higher pupil-teacher ratios (18.5 versus 17.4) than other school districts.
- The 100 largest districts employ about 21 percent of the nation's public school teachers, and account for 15 percent of all public schools and 18 percent of public high school graduates.

Appendix

The 500 largest public school districts in the United States and outlying areas, 1988–89	33

Introduction

This publication is intended to answer many of the questions that people ask about public schools and school systems. It presents statistics on several areas of interest, such as pupil per teacher ratios, number of high school graduates per district, minority enrollment versus total membership, and average and median school size, which many people consider to be an important factor in comparing school districts.

While it is impractical to publish extensive data on all of the school districts in the country, this agency has periodically presented tables on the largest school districts or those serving the largest cities. Such tables were published routinely during the 1960s and '70s, but were not produced during the early '80s. In 1988 NCES began an annual series of reports on large districts, each year increasing the number of districts included.

This is the third in a series of reports on the largest school districts in the nation. Previously published were "Characteristics of the 25 Most Populous Cities' School Systems and the 25 Largest Public Elementary and Secondary School Districts: Fall 1986," released in September 1988, and "Characteristics of the 55 Largest Public Elementary and Secondary School Districts in the United States: 1987-88," published in May 1989. These reports may be ordered from OERI's Information Services office by telephone toll-free on 1-800-424-1616. This year's report presents detailed tables on the 100 largest school districts in the United States and includes a supplemental listing of the 500 largest districts in the U.S. and outlying areas. The Puerto Rico School District, second in size only to New York City Public Schools, is not included in the tables but is in the supplemental listing.

The 100 largest school districts serve 8,788,448 students, or about 22 percent of the total public elementary and secondary school population of over 40 million students in more than 15,000 school districts in the nation. The largest school district in the country is New York City Public Schools, with 936,153 students in 999 schools. The second largest is Los Angeles Unified School District, with 592,881 students in 625 schools. The 500 largest districts (about 3 percent of all school districts) serve 17,129,113 students, or about 43 percent of the total public elementary and secondary school student population in the United States.

For a more comprehensive picture of school district distribution nationally by size, and the numbers of students served, see table A, or consult the related sources listed at the end of the text.

Table A. — Number and percentage of districts and students by district membership size for regular public elementary and secondary school district: School year 1988-89

District membership size	Districts			Students			Cumulative totals	
	Number	Percentage		Number	Percentage		Districts	Students
United States	15,376	100.0	(Cum)	40,191,624	100.0	(Cum)

Where are the 100 Largest School Districts?

The 100 largest school districts are located in the 36 states shown below. As expected, these districts tend to be in cities and counties having large populations, with administrative offices typically in large cities and their environs or other Metropolitan Statistical Areas. Many of the districts are in states where school districts are coterminous with counties. Using their names as indicators, 50 of the districts are identified with cities, 39 with counties, and 11 with other jurisdictions. Geographically, these districts tend to be located in coastal states, with 25 districts in states on the Atlantic coast, 19 in states on the Gulf coast, 13 in states bordering the Pacific Ocean, and 13 in Florida, which borders both the Atlantic Ocean and the Gulf of Mexico. Of the remaining districts, several are located in the large cities of the north central states. (See figure 2.)

How do these Districts Compare with the Average School District?

General Characteristics

According to information submitted to the National Center for Education Statistics (NCES) by education officials in state education agencies, the average school district in America has about 5 schools, 150 teachers, and 2,600 students, with an average school size of about 480 students and a mean pupil-teacher ratio of about 17.4 to 1. Among the 100 largest districts, the means are 125 schools, 4,747 teachers, and 87,650 students, yielding an average school size of about 700 and a pupil-teacher ratio of 18.5 to 1. Nationally, the number of high school graduates per year as a percentage of total school membership is about 6 percent. For the 100 largest school districts the average is about 5 percent, with the median district at 5.4. (See table B.)

Table B. – Totals of selected statistics for the 100 largest school districts compared with national public school district totals: School year 1988-89

Data item	National total	100 largest districts total	100 largest districts total as a percentage of national total
All students	40,191,624	8,788,448	21.8
Minority students	12,200,000	5,030,915	41.2
Teachers	2,316,428	474,667	20.5
Graduates	2,496,628	450,262	18.0
Schools	83,165	12,492	15.0
District	15,376	100	0.7
Pupil/teacher ratio	17.4	18.5	NA
Graduates as percent of all students	6.2	5.1	NA

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "Public Elementary and Secondary Education Universe." Minority data from Office for Civil Rights.

Student Body Composition

The 100 largest school districts, as a group, enroll a disproportionate number of the Nation's minority students. Using school district data from the Office for Civil Rights, NCES estimates that the 100 largest districts, with about 22 percent of the nation's pupils, have slightly more than 40 percent of the 12.2 million minority students in the country.* (See table B.)

*Office for Civil Rights data show the percentage of minority students in each of the 100 largest districts and a national estimate of the number of minority students in public school districts (12.2 million). Applying these percentages to the reported membership figures for the 100 largest school districts as reported to NCES in the Common Core of Data, NCES calculated the number of minority students in each school district and added these figures together to estimate the total minority membership for the 100 largest districts. This total was divided by national public school minority membership to get a percentage of minority students in the 100 largest districts as compared to all minority students in the nation's public schools.

The principal source of data for this report is the NCES Common Core of Data (CCD), which includes school level data on the racial/ethnic composition of the pupil population where the state provides that information. In this report, such data exist for 84 school districts in 30 states.

Of the 84 districts for which school-level student race/ethnic data are reported in CCD, some 44 districts report 50 percent or more of their students as white, non-Hispanic. Of these 44 districts, 17 report minority representation of less than 25 percent of their student body, and 11 of them have less than 20 percent minority students. (See table 9.)

In 14 districts half or more of the membership is black, non-Hispanic; six districts report that the majority of their students are Hispanic; and in one district most of the students are Asian/Pacific Islanders. In 19 districts there is no single racial/ethnic group comprising more than 50 percent of the student population.

Trends

The largest school districts in the United States have for the most part remained relatively stable in size over the past three years, although there are some exceptions. When 1988-89 membership is compared with that for 1986-87 (See table C):

- In both years, the 20 largest districts account for approximately 11 percent of the students in the nation's public elementary and secondary schools.
- One district, Palm Beach County, has moved from its 1986 position as 24th in size to 20th in 1988. It has displaced Jefferson County (Louisville) from the list of the 20 largest districts in 1988. Several other large districts in Florida have also shown noteworthy increases.
- Most of the districts serving large cities, as opposed to counties, have experienced some losses, with Chicago, Memphis, Houston, Baltimore, and Detroit registering the biggest losses.

Table C.—Membership trends in the 20 largest school districts in the United States: School years 1986-87 to 1988-89

1988 Rank by Size	Name of reporting district	State	1986 Rank by Size	1988 membership	1986 membership	Change: 1986 to 1988	Percentage Change: 1986 to 1988
1	New York City Public Schools	NY	1	936,153	938,606	-2,453	-0.3

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, "Public Elementary and Secondary Education Agency Universe."

Methodology

The data used in this report were reported to NCES in the spring of 1989 through the Common Core of Data (CCD) survey series. There are four CCD surveys collecting basic descriptive data on public education in the Nation. Nonfiscal data are gathered through school, agency, and state forms, and fiscal data at the state level only. All responses are provided by a CCD coordinator in each state education agency. The information for these tables is taken from the Public School Universe and the Education Agency Universe collections unless specifically noted otherwise. Because the information is supplied by state education agencies, any item of data missing for a given school district is generally missing for all other districts in the same state.

Response Rates

As a result of the positive response of education officials in all states to the Center's request for data, the files used for this report contain information for all 50 states, the District of Columbia, and five outlying areas: American Samoa, Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the Virgin Islands. Data relating to the outlying areas are not included in the tables, but are included in the supplemental list of 500 school districts in the appendix.

Item Nonresponse

The number of teachers by school was not available for 14 districts. Racial/ethnic data on students were not available for 16 districts. Counts of students eligible for free lunch were not available for 64 districts. Counts of Individual Education Plans were not available for 8 districts, and a count of zero was reported for 16 districts.

Definitions

Graduates—Students who completed the course of public elementary and secondary education offered by the school district and received a regular high school diploma as defined by State law or policy during the period September 1987 through August 1988.

Median pupil-teacher ratio—The ratio of pupils to teachers in the school which is midway between the school having the highest ratio and that having the lowest ratio in a given school district when the schools are arrayed in a list in order of descending ratios.

Public school—An institution which provides educational services and has the following characteristics:

- has one or more grade groups (prekindergarten through grade 12) or is ungraded;
- has one or more teachers to give instruction;
- is located in one or more buildings or sites;
- has an assigned administrator;
- receives public funds as primary support; and
- is operated by an education agency.

Pupils in membership— Count of all students whose names have been entered on the roll during a given school year, minus those whose names have been withdrawn on or before the closest school day to October 1. Membership counts at the district level may include students for whom the district is providing educational services through some other agency or institution.

Schools having membership—Schools at which students are counted for administrative purposes, even though the students may attend one or more other schools for all or part of their school day.

Teachers—Sum of full-time equivalent (FTE) count of teachers by school for all schools in a school district.

Acknowledgments

The author gratefully acknowleges the comments and suggestions of the reviewers: Mike Casserly of the Council of Great City Schools; Paul Siegel of the U.S. Bureau of the Census; Fred Beamer of OERI Information Services; and Susan Ahmed, Marilyn McMillen, McKnight Black, Laurence Ogle, and Tongsoo Song of the National Center for Education Statistics. Special thanks are due to Frank Morgan of NCES for the creation and production of the tables and to Carol Antishin of Pinkerton Computer Consultants for the graphic figures.

Detailed Tables

The Tables

Table 1 presents basic data—numbers of schools, teachers, students, and graduates—for each of the 100 largest districts. Also shown in table 1 is information to fully identify each school district, since the name of the district is not always sufficient for this purpose. On this and all the other tables the districts are shown in order of size (pupils in membership as of October 1988). Since the districts are arrayed by number of pupils, it is easy to note the differences in the numbers of schools, teachers, and graduates as they relate to districts of similar size. For example, although the Los Angeles Unified School District has more than twice as many students as the Philadelphia School District, it has fewer than twice as many teachers. Fairfax County (Virginia) Public Schools, though smaller in size than the Houston Independent School District, has more graduates.

Table 2 shows the number of schools in the 100 largest districts, by type of school. All but six of the districts have specialized schools devoted to special, vocational, or alternative education. The numbers of students assigned to these schools are given on Table 3. It should be noted that students attending a specialized school are often counted at their (regular) home school rather than at the specialized school they attend. Since pupil membership configurations are necessary for determining school categories in tables 4 through 9, only schools having membership, or "regular" schools having membership, as specified in the table, are used in the data sets from which these tables are derived. It can be seen from these tables that districts vary widely in their use of specialized versus general schools in educating students with special needs. The number of students having Individual Education Plans (IEP) in accordance with Public Law 94-142 is shown in the last column of table 3. The great range in the number of IEPs relative to the size of the district appears to be due more to state policy than to local conditions, since all the districts in a given state tend to cluster around the same ratio of IEPs to students.

Table 4 provides information on school characteristics in the 100 districts by displaying an array showing school size (pupils in membership) at different percentile levels, as well as mean school size for each district (computed using regular schools having membership). According to this table, median school size ranges from a low of 331 pupils (St. Louis City) to a high of 1,057 (Gwinnett County, Georgia) for these districts. A school may comprise more than one building, or even multiple sites, and this is true in the case of the 7,770 member school cited, in the New York City Public Schools. Looking more closely at New York City, the table shows that 25 percent of the schools have a pupil membership of 580 or less, and another 25 percent have a membership of 1,076 or more. Dividing all the students in regular schools by the number of such schools yields a mean, or average, size of 969.1 students. If all the regular schools in New York were listed by size, the school at the mid-point on the list would have 800 pupils in membership. The median, therefore, is 800.

In table 5 data are given on the number of students assigned to graded (three categories) and ungraded classes. In accounting for their students, 50 of the 100 largest districts assign all students to numbered grades and 50 use the "ungraded" status for students in some settings, such as special education, vocational education, and other specialized and alternative programs. In this table all students assigned to schools, regardless of type, are counted in the grade for which they are reported.

People frequently want to know how many "elementary schools" and "high schools" there are in any selection of school districts. Table 6 deals with these questions. Since nearly every conceivable grade span configuration is found among the 12,500 schools in the 100 largest districts, the following four categories are used: primary (low grade of PK to 3; high grade up to 8), middle (low grade 4 to 7; high grade 4 to 9), high (low grade 7 to 12; high grade 12), and other (all other configurations). Any school not having regularly assigned membership is excluded from the school counts for tables 6 through 10.

Table 7 shows median pupil-teacher ratios for the schools found in the categories established in table 6. Since teacher counts by school were not available for Detroit, Boston, or any of the school districts in Texas, no pupil-teacher ratio could be calculated for the schools in these districts. For these districts, an overall pupil-teacher ratio can be calculated by using the teacher and student figures in table 1. Among the 100 largest districts, the median pupil-teacher ratio for all schools in a district varied from 15.9 in Newark, New Jersey, to 26.6 in Tucson, Arizona.

Table 8 gives the number of schools in each district in five categories of minority concentration and includes a column showing the percentage of district student membership which is minority. In this report, minority is defined as all other than white non-Hispanic. Among the 20 largest districts, it is not uncommon to have two-thirds or more of the schools with more than 60 percent minority membership. Racial/ethnic data were not available for the school districts in the following States: District of Columbia, Georgia, Louisiana, Missouri, New Mexico, and Virginia.

Whereas table 8 focussed primarily on the racial/ethnic composition of schools in each district, table 9 shows the percentage of students in the entire district by racial/ethnic category. As in table 8, racial/ethnic data were not available for districts in some states. Responses were more sparse for data on students eligible for free lunch. This figure is available for only 36 districts in 14 states. Among these districts, the percentage of students eligible for free lunch under a federal program ranged from 3.3 to 74.9 percent.
